Ed,

So the most recent forecast is for single digit lows through Wednesday next week, then moderation. The following week has highs in the 40s with some rain in the forecast. So maybe best to think about the week of the 22.

Also, let Avi know to send back the foreign visitors form as soon as he can so we can minimize clearance issues for him working the T&E facility.

Talk soon.

And to you and your family.

Yes, things are moving forward. I think the temperature inside the building will be fine. I'm not sure about the relative humidity.

I will check with Avi.

Ed

Ed,

Happy new year. Looks like we are progressing with the CRADA signatures, and we are finalizing the quality assurance project plan. So everything looks good....except the weather (but we knew that). I would suggest the following schedule. Next Monday is a holiday, but perhaps Avi can come Tuesday. We can finalize planning, and start operating the system (don't think Avi would have to stay any longer than Friday. Our goal would be ~3 months of continuous operation (regardless of changing weather). Let me know what you think.

The 350 you will receive is one of the newest innovative models and will be shipping air freight this week from Israel. The machine will be shipped in a box on a pallet.

I gave Avi Tim's cell number and he will be calling him to review all of these issues.

Where is the WaterGen unit at this time?

Is there someone I can ask about how best to unload it and move it about?

I would like to work out the logistics of getting it off of the truck, and into position, ahead of time.

I'm sorry, but can you clarify "Lifting eyes".

Do you know if the unit arriving at T&E has lifting eyes?
